DETAILED ACTION

Claims 1-14 and 16-21 are pending in this Action.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. DE 19757414.9, filed on December 23, 1997.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order

for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-14 and 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5223285 (DeMichele et al). The claims are directed to a fat blend based on oils, fats and/or lecithins with a content of polyunsaturated fatty acids.

DeMichele discloses a liquid nutritional composition for enteral feeding comprising an effective amount of fatty acids including but not limited to stearidonic acid, eicosapentaenoic acid, gamma-linolenic acid and arachidonic acid (column 12, Table 4).

While the reference does not expressly disclose applicant's claimed weight percent of the claimed fatty acids, differences in concentration will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration is critical. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 105 USPQ 233, 235 (CCPA 1955).

The prior art is different from the claimed invention in that the prior art does not expressly disclose applicant's claimed concentrations, however, it would have been obvious to one of ordinary skill in the art at the time of the invention to

manipulate the amounts of the fatty acids in order to optimize the efficacy of the composition. According to the MPEP, section 2112.01, “where the claimed and prior art products are identical or substantially identical in structure or composition, or are produced by the identical or substantially identical processes, a *prima facie* case of either anticipation or obviousness has been established. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). ‘When the PTO shows a sound basis for believing that the products of the applicant and the prior art are the same, the applicant has the burden of showing that they are not.’ *In re Spada*, 1911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990). Therefore the *prima facie* case can be rebutted by evidence showing that the prior art products do not necessarily possess the characteristics of the claimed product.” This must be done without the addition of new matter to the specification.

It is the position of the examiner that these are limitations that would be routinely determined by one of ordinary skill in the art, through minimal experimentation, as being suitable, absent the presentation of some unusual and/or unexpected results. The results must be those that accrue from the specific limitations.

Conclusion

No claims are allowed at this time.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Abbruzzese et al (US 6077828) teaches nutritional compositions comprising effective amounts of fatty acids such as alpha-linolenic acid, stearidonic acid and eicosapentaenoic acid.
